                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              셤
                                                                                                                                                                                                                                                                                                                                        RESULT 23
US-09-277-020-16
US-09-277-020-16
Sequence 16, Application US/09277020
Patent No. 6210892
GENERAL INFORMATION:
TITLE OF INVENTION: Alteration of Cellular Behavior by Antisense Modulation
TITLE OF INVENTION: Of mRNA Processing.
FILE REFERENCE: ISPH-0339
CURRENT FILING DATE: 1999-03-26
EARLIER APPLICATION NUMBER: 09/167,921
SARLIER PILING DATE: 1998-10-07
NUMBER OF SEQ ID NOS: 65
SEQ ID NO 16
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                ö
                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gaps
                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 GENERAL INFORMATION:
APPLICANT: The Government of the United
APPLICANT: States of America as represented by the
APPLICANT: Secretary, Department of Health and Huan
APPLICANT: Services; Callahan, Robert; Marchetti,
APPLICANT: Antonio; Buttitta, Finama; Smith, Gilbert H.
TITLE OF INVENTION: Nucleotide And Deduced
TITLE OF INVENTION: Amino Acid Sequences Of A New Tumor Gene,
TITLE OF INVENTION: Infe, And the Use of Reagness Derived From
TITLE OF INVENTION: These Sequences In Diagnostic Assays,
TITLE OF INVENTION: Vaccines, Immunotherapy And Gene Therapy
                                                                                                                                                                          ;

Sequence 9, Application US/09378842

BENERAL INFORMATION:
APPLICANT: The Government of the United
APPLICANT: States of America as represented by the
APPLICANT: Services; Callahan, Robert; Marchetti,
APPLICANT: Antonio; Buttltta, fiamm; Smith, Gilbert H.
TITLE OF INVENTION: Nucleotide And Deduced
TITLE OF INVENTION: Amino Acid Sequences Of A New Tumor Gene,
TITLE OF INVENTION: Inte, And the Use Of Reagents Derived From
TITLE OF INVENTION: These Sequences In Diagnostic Assays,
TITLE OF INVENTION: Vaccines, Immunotherapy And Gene Therapy
NUMBER OF SEQUENCES: 32

US-09-198-452A-1803/c
Sequence 1803, Application US/09198452A
Sequence 1803, Application US/09198452A
Patent No. 6559294
GENERAL INFORMATION:
APPLICANT: GTIffais, R.
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments
TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preve
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: 1996-199
CURRENT APPLICATION NUMBER: US/09/198,452A
CURRENT FILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
SEQ ID NO 1803
LENGTH: 20
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 6795, Application US/09422978

Sequence 6795, Application US/09422978

Patent No. 6537751

GENERAL INFORMATION:
APPLICANT: Cohen, Daniel
APPLICANT: Chumakov, Ilya
TITLE OF INVENTION: Biallelic markers for use in constructing a high density...

Sequence 86, Application US/08829637A

Sequence 86, Application US/08829637A

Patent No. 6339066

GENERAL INFORMATION:

APPLICANT: C. Frank Bennett

APPLICANT: Phillip Dan Cook

APPLICANT: Claim Hoke

TITLE OF INVENTION: PHOSPHOROTHIOATE LINKAGES OF HIGH CHIRAL PURITY AND

TITLE OF INVENTION: PHOSPHOROTHIOATE AI, aII, k, n, AND ISOFORMS OF

TITLE OF INVENTION: PROTEIN KINASE C

NUMBER OF SEQUENCES: 136

CORRESPONDENCE ADDRESS:

ADDRESSEE: Washburn Kurtz Mackiewicz & No. 6339066ris

STREET: One Liberty Place - 46th Floor

CITY: Philadelphia

CITY: Philadelphia

Sequence 4121, Application US/09198452A

GENERAL INFORMATION:
GENERAL INFORMATION:
TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments TITLE OF INVENTION: and treatment of infection
TITLE OF INVENTION: and treatment of infection
FILE REFERENCE: 9710-003-999
CURRENT APPLICATION NUMBER: US/09/198,452A
CURRENT FILING DATE: 1998-11-24
NUMBER OF SEQ ID NOS: 6849
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               GENERAL INFORMATION:

Sequence 6581, Application US/09198452A

Patent No. 655292104

GREERAL INFORMATION:

APPLICANT: Griffals, R.

TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments TITLE OF INVENTION: Chlamydia pneumoniae genomic sequence and polypeptides, fragments TITLE OF INVENTION: thereof and uses thereof, in particular for the diagnosis, preverting OF INVENTION: and treatment of infection

TITLE OF INVENTION: and treatment of infection

TITLE OF INVENTION: and treatment of infection

GURRENT APPLICATION NUMBER: US/09/198,452A

CURRENT PILING DATE: 1998-11-24

NUMBER OF SEQ ID NOS: 6849

SEQ ID NO 6581

; Sequence 12, Application US/10054225
; Patent No. 6623931
; GENERAL INFORMATION:
; APPLICANT: Saint Under Children's Research Hospital
; APPLICANT: Atkinson, Robyn M
; TITLE OF INVENTION: Diagnostic Assay for Antibiotic Tolerance
; APPLICANT: Atkinson, Robyn M
; TITLE OF INVENTION: Diagnostic Assay for Antibiotic Tolerance
; RIER REPERENCE: 30.01-0022
; CURRENT APPLICATION UNBERS: US/10/054,225
; CURRENT PILING DATE: 2001-11-13
; SEQ ID NOS: 12
; SOFTWARE: PatentIn version 3.1

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ö
                                                                                                                                                                                                                                                                                                                                US-09-665-615B-156/C

Sequence 156, Application US/09665615B

Patent No. 6653133

GRENERAL INFORMATION:
APPLICANT: Watt, Jacqueline
APPLICANT: Watt, Jacqueline
TITLE OF INVENTION: Antieense Modulation of Fas Mediated Signaling
FILE REFERENCE: ISPH-0502
CURRENT APPLICATION NUMBER: US/09/665,615B
CURRENT FILING DATE: 1909-04-12
PRIOR FILING DATE: 1999-04-12
NUMBER OF SEQ ID NOS: 179
SOFTWARE: PatentIN Ver. 2.0
LENGTH: 20
NAME/KEY: primer_bind

| LOCATION: 1..20

| OTHER INFORMATION: upstream amplification primer 99-5681 for SEQ 1690,

Sequence 12, Application US/08219842

Patent No. 5565323

GENERAL INFORMATION:
APPLICANT: Parker, W. D.
TITLE OF INVENTION: Diagnostic and Therapeutic Compositions
TITLE OF INVENTION: for Alzheimer's Disease
NUMBER OF SEQUENCES: 95
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell and Flores
STREET: 4370 La Jolla Village Drive, Suite 700
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 12, Application US/08451096

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sequence 23, Application US/08219842

Sequence 23, Application US/08219842

Patent No. 5465323

GENERAL INFORMATION:
APPLICANT: Parker, W. D.
APPLICANT: Parker, W. D.
TITLE OF INVENTION: Diagnostic and Therapeutic Compositions
TITLE OF INVENTION: for Alzheimer's Disease
NUMBER OF SEQUENCES: 95
CORRESPONDENCE ADDRESS:
ADDRESSEE: Campbell and Flores
STREET: 4370 La Jolla Village Drive, Suite 700

; LOCATION: 1..18 - A. OTHER INFORMATION: downstream amplification primer 99-4448 for SEQ 3487, in complemed US-09-4422-978-11352
      Sequence 11352, Application US/09422978

Sequence 11352, Application US/09422978

Sequence 11352

GENERAL INFORMATION:

APPLICANT COhen, Daniel

APPLICANT: Chumakov, Ilya

TITLE OF INVENTION: Blallelic markers for use in constructing a high density...

FILE REPRENCE: GENSET.020CP1

CURRENT APPLICATION NUMBER: US/09/422,978

CURRENT APPLICATION NUMBER: US 09/298,850

EARLIER PELING DATE: 1999-10-20

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         VENOUR TO A PAPPLICATION US/08774310

Sequence 354, Application US/08774310

Patent No. 5877022

GENERAL INFORMATION:
APPLICANT: Stinchcomb, Daniel T.
APPLICANT: Newton, Roger S.
APPLICANT: Ramharack, Randy
TITLE OF INVENTION: REDAYME TREATMENT OF DISEASES
TITLE OF INVENTION: PLASMA LIPOPROTEIN
TITLE OF INVENTION: PLASMA LIPOPROTEIN
TITLE OF INVENTION: INHIBITING APOLIPOPROTEIN
                                                                                                                                                                                                                                                                                                                                                       Query Match

Sequence 3, Application US/09169248

Patent No. 6107478

GENERAL INFORMATION:
APPLICANT: Loud, Anders H
APPLICANT: Loumad, Jette
APPLICANT: Loumad, Jette
APPLICANT: Loumad, Jette
APPLICANT: Duch, Mogens
TITLE OF INVENTION: SYSTEM FOR SAID VECTOR, A REFLICATION
TITLE OF INVENTION: TRANSFECTED WITH SAID VECTOR
NUMBER OF SEQUENCES:
CORRESPONDENCE ADDRESS:
ADDRESSEE: Gordon W. Hueschen
STREET: 715 The "H" Building, 310 East Michigan
STREET: Avenue
CITY: Kalamazoo
STREET: Avenue
